

# anti-clogging rope

# accessories

The MINGRET anti-clogging rope works with the screening machine vibrations. The movement of the rope elements break the screening mesh clogging, or push the plugged materials through the meshes.

The rope elements are made of anti-abrasive POLYURETHANE, for a longer lifetime and to limit the wear of screening cloths.

The spider shape of elements allows a maximum working surface, and increases the productivity of your screening machine.

## ASSEMBLING

1

Setting of each element

2

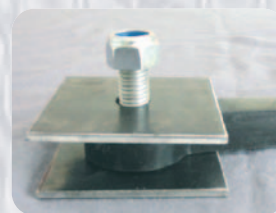

Connection of elements

3

Welding of the fixing plate at the top of the screen frame

4

Attachment of the rope to the fixing plate

Thanks to the multi-fixation rope attachment, you can set the rope up or down with 3 positions

## MODELS AND ACCESSORIES

The « mini » rope is advised for declogging on fragile screens when split is lower than 4 mm.

A lot of accessories are available :

- extension pieces
- connection pieces
- ...
